Fire retardant fabrics

A standard range of fire retardant cushions (high resilience indoor foam and fabric) is available using the fabrics listed on the next page.

All other fabrics can be offered as fire retardant for orders with a minimum fabric usage of 200 meters, price on demand.

Foams and cushions have been tested according to the British Standard BS5852 and have passed the cigarette match test (ignition source 0) and the butane flame test (ignition source 1).

Please note that fire retardant cushions must be kept dry at all times. We recommend storing your cushions in a cushion box or covering your furniture with a protective cover.
